Fuel Fix

complete fuel treatment

Fuel Fix is the latest technology in fuel additives for the elimination and control of contaminants in diesel fuel. Improves power and reduces consumption by as much 6%. Removes sludge associated with fungal growth, as well as gum and resin build up in injectors and lines as well as stabilises unleaded petrol.

Dosage: Dosage of only 25mls for every 100L of diesel is required. However, if required a 'shock' dose of 100ml for 100L of diesel can be administered.

First Aid: For advice, contact the Poisons Information Centre (Australia Ph: 131 126, New Zealand Ph: 0800 794 766) or a Doctor immediately.

Designed, tested and produced in Australia for Australian conditions.
